NJDEP Air Quality Permitting Transformation

Summary of Additional Topics

(New Comments received via e-mails from External Stakeholders after the 2/11/11 Meeting)

1. Develop more flexible and user friendly permitting process for minor sources.
2. The Department should consider restructuring to combine permitting and enforcement.
3. The NJEMS database should be upgraded for better interface to populate forms and upload applications. (For example, use of newer Excel based interface to populate forms and upload/submit an application.)
4. Develop procedures to modify permits for like-kind replacement of equipment when there is no increase in emissions.
5. The Department should use discretion and require state of the art controls/technology while approving Title V renewals.
